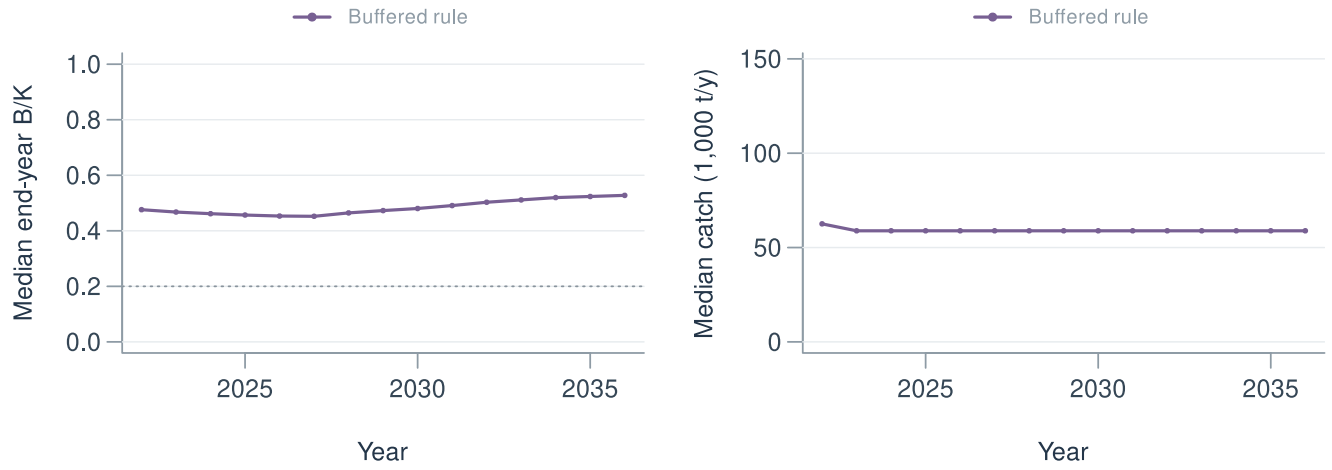
Buffered rule

MSE analyst · Run 001 · Years 2022–2036

Calculation finished (container exit 0).

Apply an index step and 80% catch buffer; limit annual advice changes to 15%.



Rule	Mean catch (t/y)	Final B/K	Below 0.2 (%)	Catch change (%)	Capped trials
Buffered rule	57500	0.5276	0	6.388	0

Final B/K is the trial median; below-threshold counts trials with any low-biomass year. Catch change includes the first change from reference catch. Capped trials had requested catch above the biomass guardrail.

160 trials per rule; 15 future years; 4 fitted cases; 2 growth scenarios. All rules use the same saved errors and cases, with equal case/scenario weights. Realised catch is capped at 40% of starting biomass. Dotted line: B/K = 0.2.

Scope: these illustrative trials use simplified fitted cases and errors; trial fractions are not calibrated management risks.
