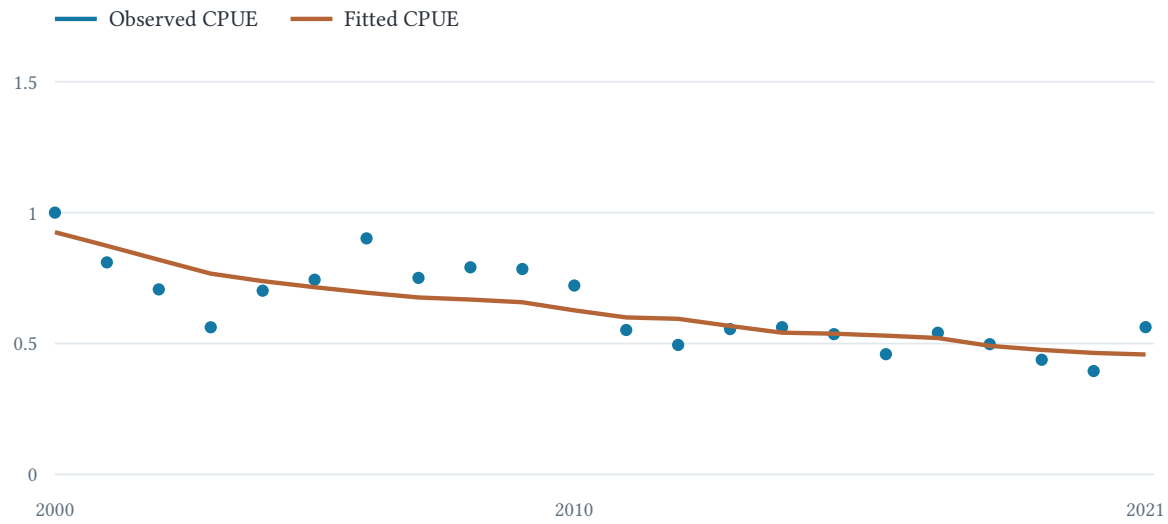
Assessment A2

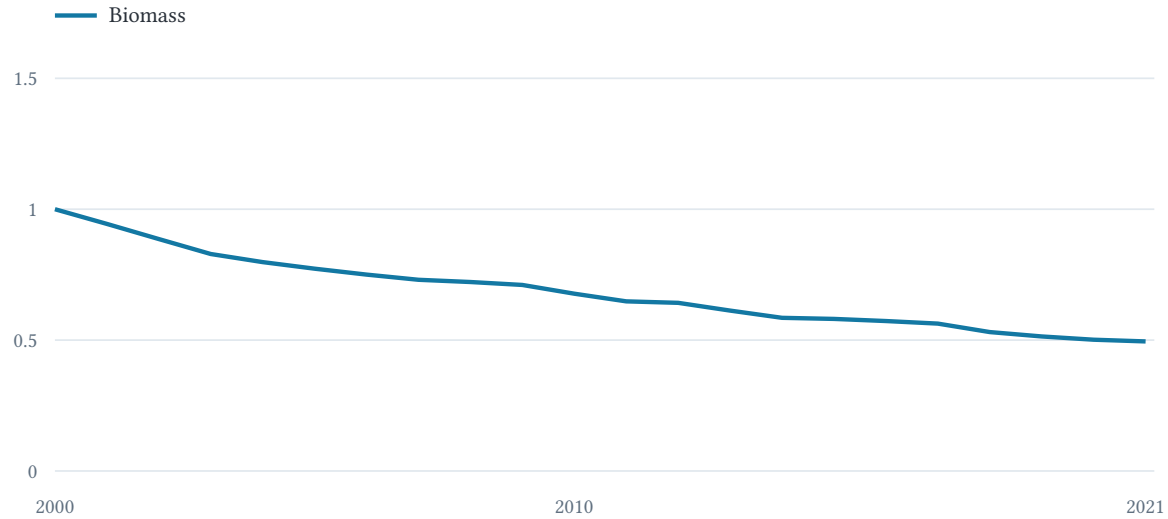
Fit the annual CPUE index and carry catch removals through the stock model.

Observed and fitted CPUE



Relative CPUE

Biomass trajectory



Biomass / carrying capacity

Schaefer model · intrinsic growth 0.30 per year · R/RTMB fit · initial biomass equals carrying capacity.

Points are observed indices; the fitted line follows model biomass. Biomass is relative to the fitted capacity.

Recorded check	Result
Biomass recurrence	Pass
Positive biomass	Pass
Projected gradient	Pass

These checks do not establish model adequacy.

The selected Fiji fleet index is not a validated stock-wide abundance index. Using it with stock-wide catches is a teaching assumption.
