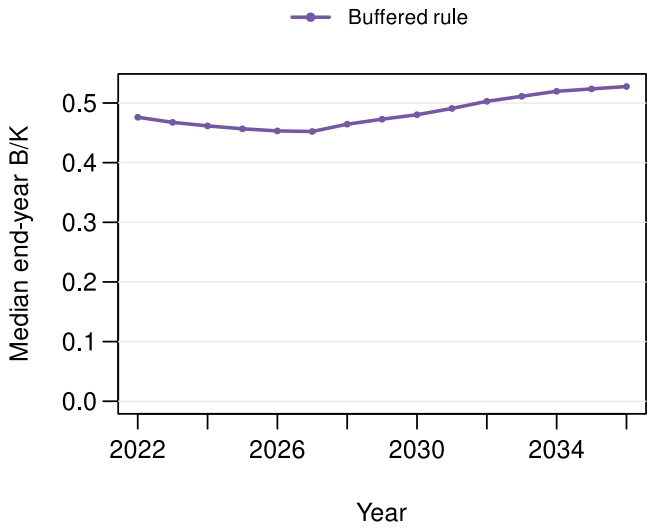
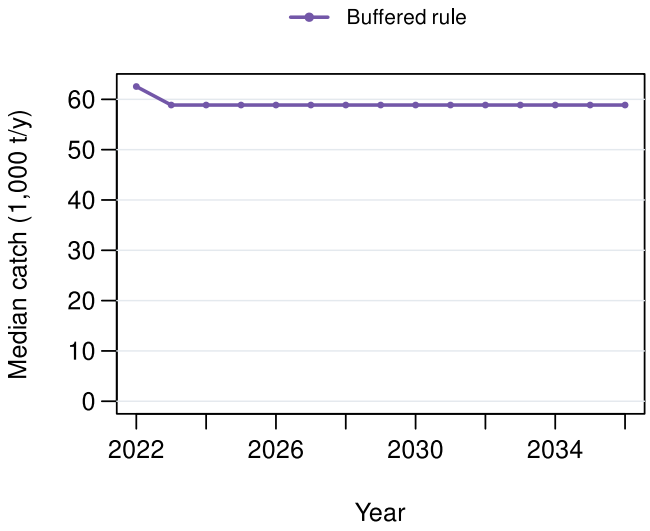
Buffered rule

Apply an index step and 80% catch buffer; limit annual advice changes to 15%.





Rule	Catch (t/y)	Final B/K	Below 0.2 (%)	Catch change (%)	Capped trials
Buffered rule	57500	0.5276	0	6.388	0

Catch is the trial mean; final B/K is the trial median. Below-threshold means any year. Catch change includes the first change from reference catch; capped trials requested more than the guardrail allowed.

15 years; 20 trials per case/scenario. Realised catch ≤ 40% of true starting biomass. Equal case/scenario weights; all comparisons are conditional on the shared guardrail. Toy lognormal errors and fixed fitted cases provide illustrative trial fractions, not calibrated risk.

Scope: selected Fiji fleet index with stock-wide catches is a teaching assumption; the index is not validated as stock-wide abundance.
